Preview-Generator Bilder

The app does not replace on demand preview generation so if a preview is requested before it is pre-generated it will still be shown. The first time you install this app, before using a cron job, you properly want to generate all previews via: **./occ preview:generate-all -vvv**

Important: To enable pre-generation of previews you must add **php /var/www/nextcloud/occ preview:pre-generate** to a system cron job that runs at times of your choosing.

OCC Befehle & Cronjobs

Den OCC Befehl kann über das Terminal im Container gestartet werden und befindet sich in

```
/config/www/nextcloud/occ
```

Befehle:

occ preview:generate-all -vvv *#Erzeugt initial alle preview-images über den Previewgenerator*

php /var/www/nextcloud/occ preview:pre-generate *#to a system cron job that runs at times of your choosing.*

Upgrade über Konsole

```
sudo -u abc php /config/www/nextcloud/updater/updater.phar  
sudo -u abc php /config/www/nextcloud/occ upgrade  
sudo -u abc php /config/www/nextcloud/occ maintenance:mode --off
```
